

IMC Remotely Controlled Safety Hook *FASTMAX RES 7*

A radical new concept in lifting hooks offers substantial improvements in safety and operational use:

- Design based on remote connection of lifting eye and hook
- Steering wire connected to hook tip

Application use in adverse circumstances instead of conventional hooks. Typical application:

- Retrieval of small (rescue) boats
- Loads / Containers on supply vessels
- Other exposed lifting applications with motions

Connection

- Guide steering wire through lifting eye
- Pull the wire from safe distance
- Lifting eye connects easily into hook mouth
