

IMC Maritime System Development

Your partner in the development of maritime technology

General Information:

IMC Maritime System Development is a unique organisation that focusses on the development of maritime technology. The organisation is formed around a core of highly qualified consultants with backgrounds in the fields of marine design, construction, operations and marketing.

Our Strategy:

Development of products and systems with high levels of added value and market fit in combination with short development cycles.

The Carrousel

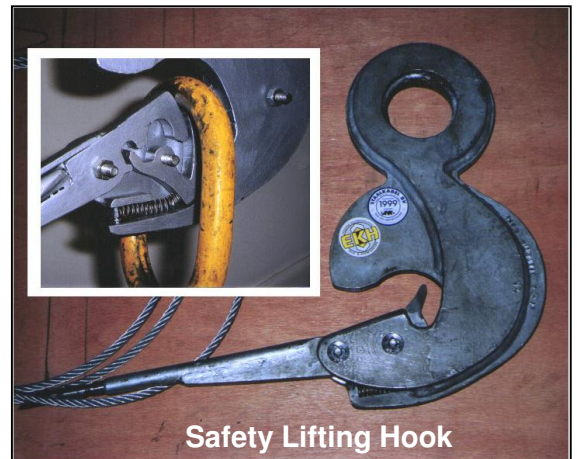

IMC Maritime System Development is dedicated to the success of its clients. This commitment is translated into a unique approach. We offer to perform a preliminary analysis free of charge. If supplied with a clear definition of technical problems or market opportunities a project team will spend up to 6 hours analysing a range of technical and commercial solutions. We will only offer the client our services if we feel that we can work out a solution which is both **acceptable** and **attractive**.

Our Services:

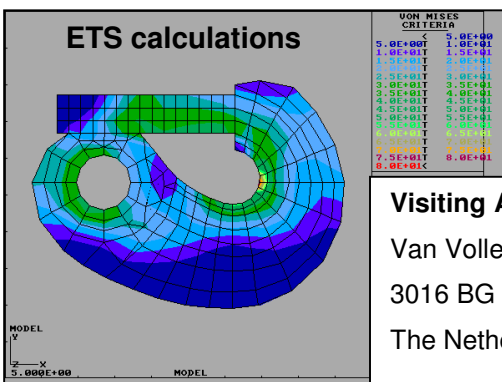

The consultants of IMC Maritime System Development can be contracted in many different ways. Ranging from turn-key development to benchmarking the work of others. The services are provided on hourly rates and lump-sum contracts for entire projects.

Recent Developments:

Including following projects: Carrousel Tug and winch, Caltax Emergency Towing System, Safety Lifting Hook. Work in close cooperation with in-house specialists.

Safety Lifting Hook
